42a. $2(w + \ell) = 26; w + \ell = 13; w = 13 - \ell$

$$A = -6.5^2 + 13(6.5) = 42.25, \text{ vertex } (6.5, 42.25)$$

43b. $h = -4.9(0.6)^2 + 3.82(0.6) + 1.7 \approx 2.23$; no, because at 0.6 seconds the ball has a height of about 2.23 m, but the net has a height of 2.43 m

No; the height of the ball is about 0.5 m, so it will take more time to reach the ground.

10-9 Choosing a Linear, Quadratic, or Exponential Model pages 559–566

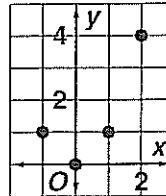

Check Skills You'll Need For complete solutions see *Daily Skills Check and Lesson Quiz Transparencies or Presentation Pro CD-ROM*.

Check Understanding

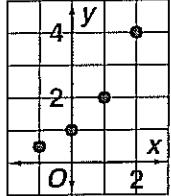

- 1a. linear

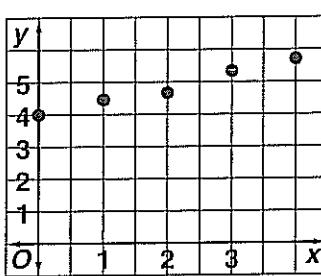

- 1b. quadratic

- 1c. exponential

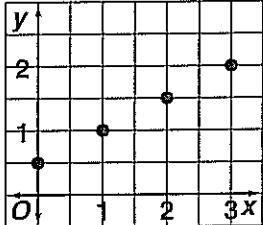

- 2a.

Test for a common ratio: $4.4 \div 4 = 1.1$,
 $4.84 \div 4.4 = 1.1$,
 $5.324 \div 4.84 = 1.1$,
 $5.8564 \div 5.324 = 1.1$;
 common ratio is 1.1,
 so write an exponential model:
 $y = 4 \cdot 1.1^x$.

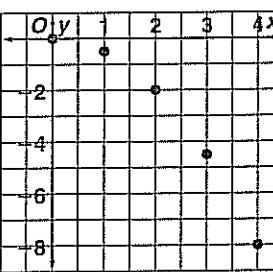

- 2b.

- Test for a common difference:

$1 - \frac{1}{2} = \frac{1}{2}$,
 $1\frac{1}{2} - 1 = \frac{1}{2}$, $2 - 1\frac{1}{2} = \frac{1}{2}$;
 common difference is $\frac{1}{2}$,
 so write a linear model:
 $y = \frac{1}{2}x + \frac{1}{2}$.

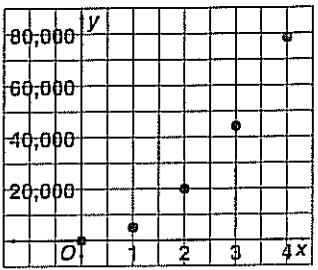

- 2c.

Test for a common second difference:
 $-0.5 - 0 = -0.5$,
 $-2 - (-0.5) = -1.5$,
 $-4.5 - (-2) = -2.5$,
 $-8 - (-4.5) = -3.5$, and
 $-1.5 - (-0.5) = -1$,
 $-2.5 - (-1.5) = -1$,
 $-3.5 - (-2.5) = -1$;
 common second

difference is -1 , so write a quadratic model: $y = ax^2$,
 $-2 = a \cdot 2^2$, $a = -\frac{1}{2}$; $y = -\frac{1}{2}x^2$.

- 3a.

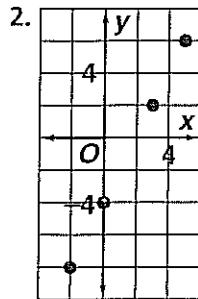

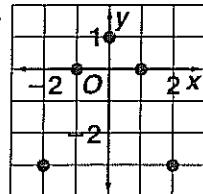

Test for a common second difference:
 $5000 - 0 = 5000$,
 $20000 - 5000 = 15000$,
 $44000 - 20000 = 24000$,
 $79000 - 44000 = 35000$, and
 $15000 - 5000 = 10000$,
 $24000 - 15000 = 9000$, $35000 - 24000 = 11000$;

common second difference is about 10,000, so the function is quadratic.

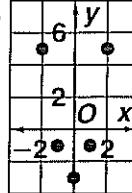

3b. $y = ax^2$; $20,000 = a \cdot 2^2$, $a = 5000$; $y = 5000x^2$

Exercises 1. quadratic

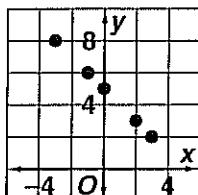

linear

4. quadratic

6. linear

7. Test for a common second difference: $1.5 - 0 = 1.5$, $6 - 1.5 = 4.5$, $13.5 - 6 = 7.5$, $24 - 13.5 = 10.5$, and $4.5 - 1.5 = 3$, $7.5 - 4.5 = 3$, $10.5 - 7.5 = 3$; common second difference is 3, so the function is quadratic.

$$y = ax^2, 6 = a \cdot 2^2, a = 1.5; y = 1.5x^2$$

8. Test for a common difference:

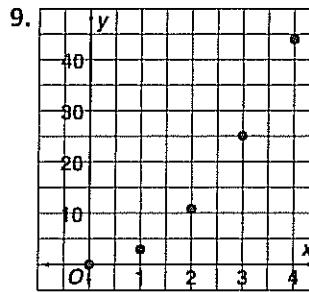

$$\begin{aligned} -3 - (-5) &= 2, \\ -1 - (-3) &= 2, \\ 1 - (-1) &= 2, 3 - 1 = 2; \\ \text{common difference} & \end{aligned}$$

is 2, so the function is linear. $y = 2x - 5$

Test for a common difference:

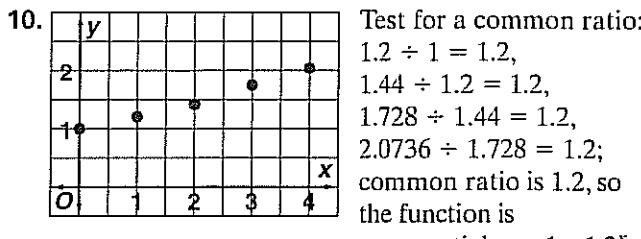

$$\begin{aligned} -3 - (-5) &= 2, \\ -1 - (-3) &= 2, \\ 1 - (-1) &= 2, 3 - 1 = 2; \\ \text{common difference} & \end{aligned}$$

is 2, so the function is linear. $y = 2x - 5$

1. The U-shaped graph of a quadratic function is a parabola. 2. If the quadratic expression $ax^2 + bx + c$ cannot be factored, one good way to solve the equation $ax^2 + bx + c = 0$ is to use completing the square.
3. If $a^2 = b$ and $a > 0$, then a is the principal square root of b . 4. The vertex of a parabola is the point at which the parabola intersects the axis of symmetry.
5. The discriminant can be used to determine the number of solutions of a quadratic equation.
